Irancode
Iran

Tasks and Achievements

- worked on the "App Besaz" startup; a platform that makes the process of building applications super easy for everyone.
- participated in development and publish of an application called "Ilam Service"; an application that helped locals find their desired services.

Research

Identifying the social circles of each person using

February 2022

graph databases

Publisher: IUT

In this research, I was trying to find the "social circles" of a person, by observing his/her connections and interactions with another person, in a social network.

Projects

Joopeg

For: Joopeg

This app connects buyers to sellers. The backend is fully handled in Firebase, and Bloc is used for state management. Some key functionalities: post ads, see others' ads, find your contacts on the app, contact ad posters, and chat.

Link : <https://apps.apple.com/ca/app/joopeg/id1642271839>

doclet

For: OK advertising LLC

This app helps clerks keep track of their documents and letters, and see their upcoming events in a calendar, to the app store.

Link : <https://play.google.com/store/apps/details?id=net.doclet>

Master Key

For: OK advertising LLC

As of now "Master Key" consists of two separate applications. The main idea of these two applications is to connect clients to workers that aren't necessarily from the same language. This app is especially useful in countries with a lot of migrants. "Master Key" is an application that helps users find their desired services, post job offers, or check services close to them. It also helps them pay online, and is localized for 5 different languages. "Master Key Worker" is an application, in which workers or service companies can sign up and offer their services at their desired prices. This app uses firebase for authentication and chat. These two apps are going to be published to Google Play and the app store soon.

Product Owner

For: Irancode

"App Besaz" Startup: the key idea of this startup was to help individuals/companies build their applications with minimum effort and as fast as possible, with no need for a professional developer (drag & drop UI elements on the screen).

Flutter developer

For: Irancode

In this application, customers can find and reserve some services/products in the city of "Ilam".
